SAP ERP Project Report

SAP ERP Blueprint: Design and Setup of a Fictitious Company

Using FI | MM | SD Modules

Fictitious Company: VedaStar Retail Solutions Pvt. Ltd.

Submitted By

Field	Details
Student Name	Ayush Raj
Roll Number	23051337
Program	B.Tech (SAP Business Cloud Data Analyst)
University	KIIT University, Bhubaneswar
Academic Year	2025-2026
Submission Date	April 2025

1. Executive Summary

This report presents a complete SAP ERP blueprint for a fictitious Indian company called VedaStar Retail Solutions Pvt. Ltd. The company sells consumer electronics and home appliances across multiple cities in India. As the business grew, it faced many problems in managing its day-to-day operations — like tracking stock manually, raising bills on paper, and keeping accounting records in spreadsheets.

To solve these problems, the company decided to implement SAP ERP. SAP (Systems, Applications, and Products in Data Processing) is a software used by companies all over the world to manage their business processes digitally — all in one system.

In this project, three main SAP modules are used:

- FI (Financial Accounting) — To manage all money-related transactions, payments, and financial reports.
- MM (Materials Management) — To handle purchasing, stock management, and supplier dealings.
- SD (Sales and Distribution) — To manage customer orders, product deliveries, and billing.

The report explains the company profile, enterprise structure, master data setup, two important business process flows (Procure-to-Pay and Order-to-Cash), and how the three SAP modules work together. All information is kept simple so it is easy to understand and explain in a viva.

2. Problem Statement

Before implementing SAP, VedaStar Retail Solutions Pvt. Ltd. was managing its business operations manually or using separate spreadsheet tools. This created several serious problems:

Key Problems Faced by the Company

- No single system: Different departments (accounts, warehouse, sales) worked in isolation. Data was stored in separate Excel files and was not shared automatically.
- Stock confusion: The warehouse team did not know the exact quantity of goods available. Items were sometimes over-ordered or out of stock due to poor visibility.
- Delayed payments: Invoice processing took too long because there was no proper system to match purchase orders, goods receipts, and vendor bills.
- Customer service issues: Sales team did not know stock availability in real time, leading to wrong delivery promises to customers.

- Human errors in accounts: Manual data entry caused calculation mistakes in financial statements, tax filings, and vendor payments.
- No real-time reports: Management could not see up-to-date business performance because reports were prepared manually at the end of each month.

In simple words — the company was running like a machine with broken gears. Every department was working hard, but they were not connected. This cost the company time, money, and customer trust.

SAP ERP solves all of these problems by bringing every department into one connected digital system.

3. Solution — What SAP ERP Provides

SAP ERP acts as a central platform where all business activities are recorded and shared in real time. When one department updates data, other departments can see it immediately. Here is how each module helps:

SAP Module	Problem It Solves	Key Benefit
FI — Financial Accounting	Manual accounting and payment errors	Automatic accounting entries, real-time balance sheet
MM — Materials Management	Stock confusion and slow purchasing	Automated purchase orders, live inventory tracking
SD — Sales & Distribution	Wrong delivery promises, billing delays	Real-time stock check, faster billing and delivery

Additional benefits of SAP ERP for VedaStar:

- All data is stored in one central database — no duplicate files
- Reports are generated instantly at any time
- GST and tax calculations are done automatically
- Audit trail is available for every transaction
- Reduces paperwork and manual effort

4. Company Profile — VedaStar Retail Solutions Pvt. Ltd.

VedaStar Retail Solutions Pvt. Ltd. is a completely fictitious company created for this SAP project. It is designed to represent a realistic mid-sized Indian retail business so that all SAP concepts can be applied in a meaningful way.

Field	Details
Company Name	VedaStar Retail Solutions Pvt. Ltd.
Founded	2015
Industry	Consumer Electronics & Home Appliances Retail
Headquarters	Bhubaneswar, Odisha, India
Business Type	Private Limited Company
Annual Turnover	Approx. INR 85 Crore
Number of Employees	420+
Branches	Bhubaneswar, Kolkata, Patna, Ranchi
GST Number	21AADCV1234A1Z5 (Fictitious)
PAN Number	AADCV1234A (Fictitious)
SAP System Used	SAP ECC 6.0 (Simulation)

What the Company Sells

- Televisions (LED, OLED — brands like Samsung, Sony, LG)
- Washing Machines (IFB, Bosch, Whirlpool)
- Laptops and Computers (Dell, HP, Lenovo)
- Air Conditioners (Daikin, Voltas, Blue Star)
- Kitchen Appliances (Mixer grinders, microwave ovens)

Company Vision

To become the most trusted electronics retail brand in Eastern India by delivering quality products and exceptional customer service.

Company Mission

To use technology effectively to streamline operations, reduce costs, and ensure every customer gets the right product at the right time — supported by a fully integrated SAP ERP system.

5. Business Overview

VedaStar operates through four branches — one head office and three regional branches. The company buys goods from national distributors and manufacturers, stores them in regional warehouses, and sells them through showrooms and an online portal.

Organisational Hierarchy

```
VedaStar Retail Solutions Pvt. Ltd. (Head Office – Bhubaneswar)
                                  |
                +---------+---------+---------+
                |         |         |         |
               Kolkata  Patna   Ranchi  Online
                Branch   Branch  Branch  Store
```

Key Business Departments

Department	Function	SAP Module Used
Finance & Accounts	Payments, receipts, ledger, balance sheet	FI
Purchase / Procurement	Buying goods from vendors, stock replenishment	MM
Warehouse / Stores	Receiving goods, stock management	MM
Sales	Customer orders, pricing, delivery planning	SD
Billing	Raising invoices to customers	SD + FI
Management / MIS	Reports, dashboards, decision-making	FI + MM + SD

Types of Transactions

- Purchase transactions: Company buys goods from vendors like Reliance Digital Distributors, Flipkart Wholesale, and Ruchi Electronics (all fictitious).
- Sales transactions: Company sells goods to customers through showrooms and through the VedaStar online portal.
- Intercompany transfers: Goods are sometimes transferred between branches based on demand.

6. SAP Enterprise Structure

In SAP, before we start any transaction, we need to set up a structure that reflects the company's legal and operational organisation. This is called the Enterprise Structure. Think of it as the skeleton of the company inside SAP.

6.1 FI Enterprise Structure (Financial Accounting)

The FI module handles all money-related activities. Its structure consists of the following units:

FI Unit	What It Means	VedaStar Value
Client	The top-most level in SAP. Represents the entire SAP system.	100
Company Code	Legal entity that maintains its own complete set of accounts.	VS01 — VedaStar Retail Solutions
Chart of Accounts	List of all ledger accounts used for accounting entries.	VS_COA (VedaStar Chart of Accounts)
Fiscal Year Variant	Defines the financial year (April to March in India).	V3 — April to March
Posting Period Variant	Controls which accounting periods are open for posting.	VS01

6.2 MM Enterprise Structure (Materials Management)

The MM module handles purchasing and inventory. Its structure is:

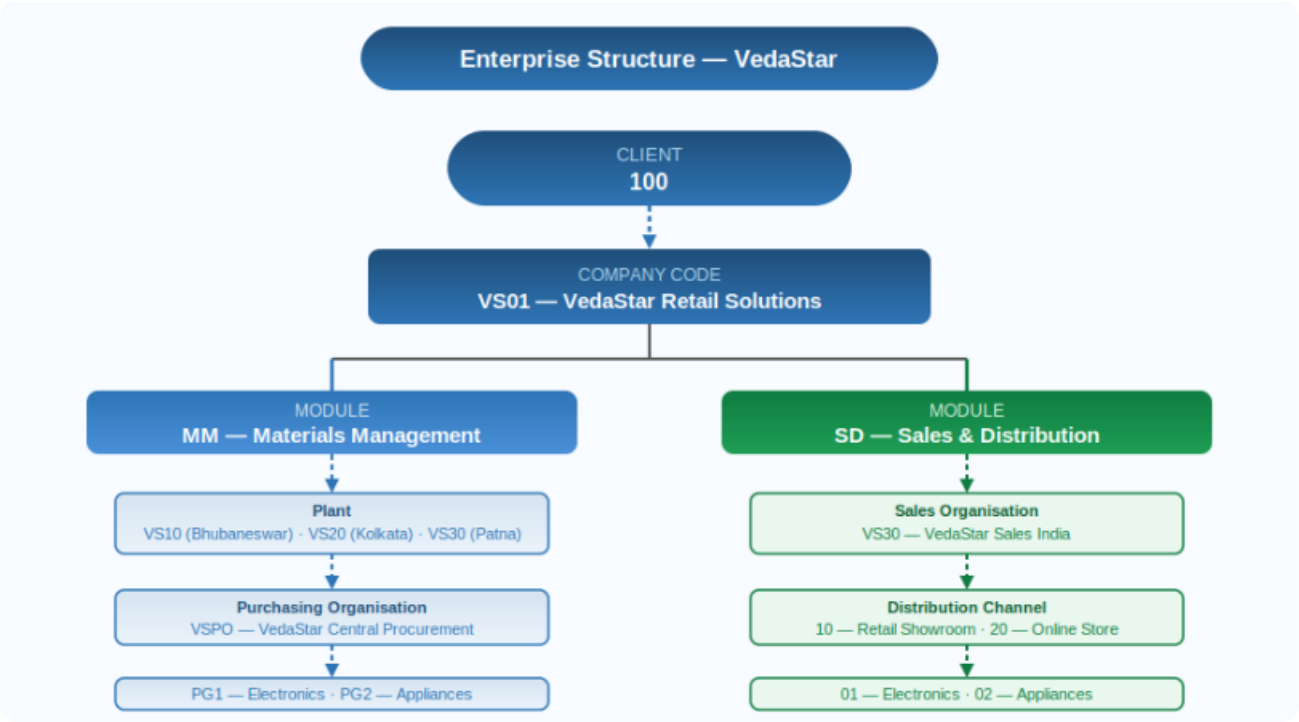
MM Unit	What It Means	VedaStar Value
Plant	A location where goods are produced or stored. In retail, it is a warehouse/branch.	VS10 — Bhubaneswar Hub VS20 — Kolkata Branch VS30 — Patna Branch
Storage Location	A specific storage area within a plant.	SL01 — Main Warehouse SL02 — Display Floor
Purchasing Organisation	The team responsible for all purchasing activities.	VSPO — VedaStar Central Procurement
Purchasing Group	A specific buyer or group of buyers within the purchasing org.	PG1 — Electronics Buyer PG2 — Appliances Buyer

6.3 SD Enterprise Structure (Sales & Distribution)

The SD module handles sales. Its structure is:

SD Unit	What It Means	VedaStar Value
Sales Organisation	The unit responsible for selling goods and services.	VS30 — VedaStar Sales India
Distribution Channel	How goods reach the customer (showroom, online, etc.).	10 — Retail Showroom 20 — Online Store
Division	Product category being sold.	01 — Electronics 02 — Appliances
Sales Area	Combination of Sales Org + Distribution Channel + Division.	VS30 + 10 + 01
Sales Office	City-level sales office.	BBR — Bhubaneswar, KOL — Kolkata

Enterprise Structure Diagram



7. Master Data

Master data is the foundation of SAP. It is the basic information about customers, vendors, and materials that is created once and reused in every transaction. Think of master data as the 'contacts list' and 'product catalogue' of the company in SAP.

7.1 Material Master

Material master stores all details about a product — what it is, how much it costs, how it is stored, and how it is sold. Each material has a unique Material Number.

Material No.	Description	Material Type	Unit	Base Price (INR)	Plant
VS-MAT-001	Samsung 55" LED TV	FERT	EA	45,000	VS10
VS-MAT-002	Bosch 8kg Washing Machine	FERT	EA	32,000	VS10
VS-MAT-003	Dell Inspiron 15 Laptop	FERT	EA	58,000	VS10
VS-MAT-004	Daikin 1.5T Split AC	FERT	EA	38,000	VS20
VS-MAT-005	Philips Mixer Grinder 750W	FERT	EA	4,500	VS30

T-Code to create Material Master: MM01 | T-Code to display: MM03

```
T-Code: MM01 → Select Material Type: FERT → Select Industry Sector: M
(Retail) → Fill: Description, UOM, Price, Storage Data → Save
```

7.2 Vendor Master

A vendor is any company or person from whom VedaStar buys goods. The vendor master stores details like name, address, bank account, and payment terms.

Vendor No.	Vendor Name	City	Payment Terms	Account Group
V-1001	Reliance Digital Distributors	Mumbai	30 days net	LIEF (Vendor)
V-1002	Flipkart Wholesale Pvt. Ltd.	Bangalore	45 days net	LIEF (Vendor)
V-1003	Ruchi Electronics Supply Co.	Delhi	15 days net	LIEF (Vendor)
V-1004	BrightTech Appliances Ltd.	Hyderabad	30 days net	LIEF (Vendor)

T-Code to create Vendor Master: XK01 | T-Code to display: XK03

7.3 Customer Master

A customer is any person or organisation that buys products from VedaStar. The customer master stores name, address, credit limit, and payment terms.

Customer No.	Customer Name	City	Credit Limit (INR)	Payment Terms
C-2001	Sharma Electronics Emporium	Patna	5,00,000	Immediate
C-2002	Digital World Retail	Ranchi	8,00,000	15 days
C-2003	Gupta Home Store	Kolkata	3,00,000	Immediate

Customer No.	Customer Name	City	Credit Limit (INR)	Payment Terms
C-2004	Aryan Modern Appliances	Bhubaneswar	10,00,000	30 days

T-Code to create Customer Master: XD01 | T-Code to display: XD03

7.4 G/L Account Master (FI)

G/L stands for General Ledger. These are accounts used to record every financial transaction. Examples of G/L accounts in VedaStar:

G/L Account No.	Account Name	Account Type
100001	Cash Account	Asset
100010	Bank Account — HDFC Current	Asset
200001	Accounts Payable (Vendors)	Liability
200010	Accounts Receivable (Customers)	Asset
300001	Sales Revenue Account	Revenue
400001	Purchases / Inventory Account	Expense

T-Code to create G/L Account: FS00

8. Customisation Steps (SPRO)

In SAP, customisation means configuring the system to match how your company works. All customisation is done through a special transaction called SPRO (SAP Project Reference Object — basically the settings/configuration menu).

This means we tell SAP: 'This is our company, this is how we want things to work.' We do not change SAP's code — we just set our preferences.

8.1 FI Customisation

Step No.	What We Configure	T-Code / Path
FI-01	Create Company Code VS01	OX02
FI-02	Define Chart of Accounts: VS_COA	OB13
FI-03	Assign Chart of Accounts to Company Code	OB62
FI-04	Define Fiscal Year Variant (April–March)	OB29
FI-05	Assign Fiscal Year to Company Code	OB37
FI-06	Define Posting Period Variant	OBBO
FI-07	Create G/L Accounts	FS00
FI-08	Define Payment Terms	OBB8
FI-09	Configure Tax Procedure (GST)	OBYZ

8.2 MM Customisation

Step No.	What We Configure	T-Code / Path
MM-01	Define Plant VS10, VS20, VS30	OX10
MM-02	Define Storage Locations	OX09
MM-03	Create Purchasing Organisation VSPO	OX08
MM-04	Assign Purch. Org to Company Code and Plant	OX01 / OX17
MM-05	Define Number Ranges for Purchase Orders	OMH6
MM-06	Set Valuation Area (at Plant level)	OMWM
MM-07	Configure Movement Types for GR/GI	OMJJ

8.3 SD Customisation

Step No.	What We Configure	T-Code / Path
SD-01	Define Sales Organisation VS30	OVX5
SD-02	Define Distribution Channels (10, 20)	OVXI
SD-03	Define Divisions (01, 02)	OVX3

Step No.	What We Configure	T-Code / Path
SD-04	Set Up Sales Area (Org + Channel + Division)	OVXG
SD-05	Assign Sales Org to Company Code	OVX3
SD-06	Define Pricing Procedure	V/08
SD-07	Configure Output (Invoice print format)	NACE
SD-08	Define Shipping Points	OVXD

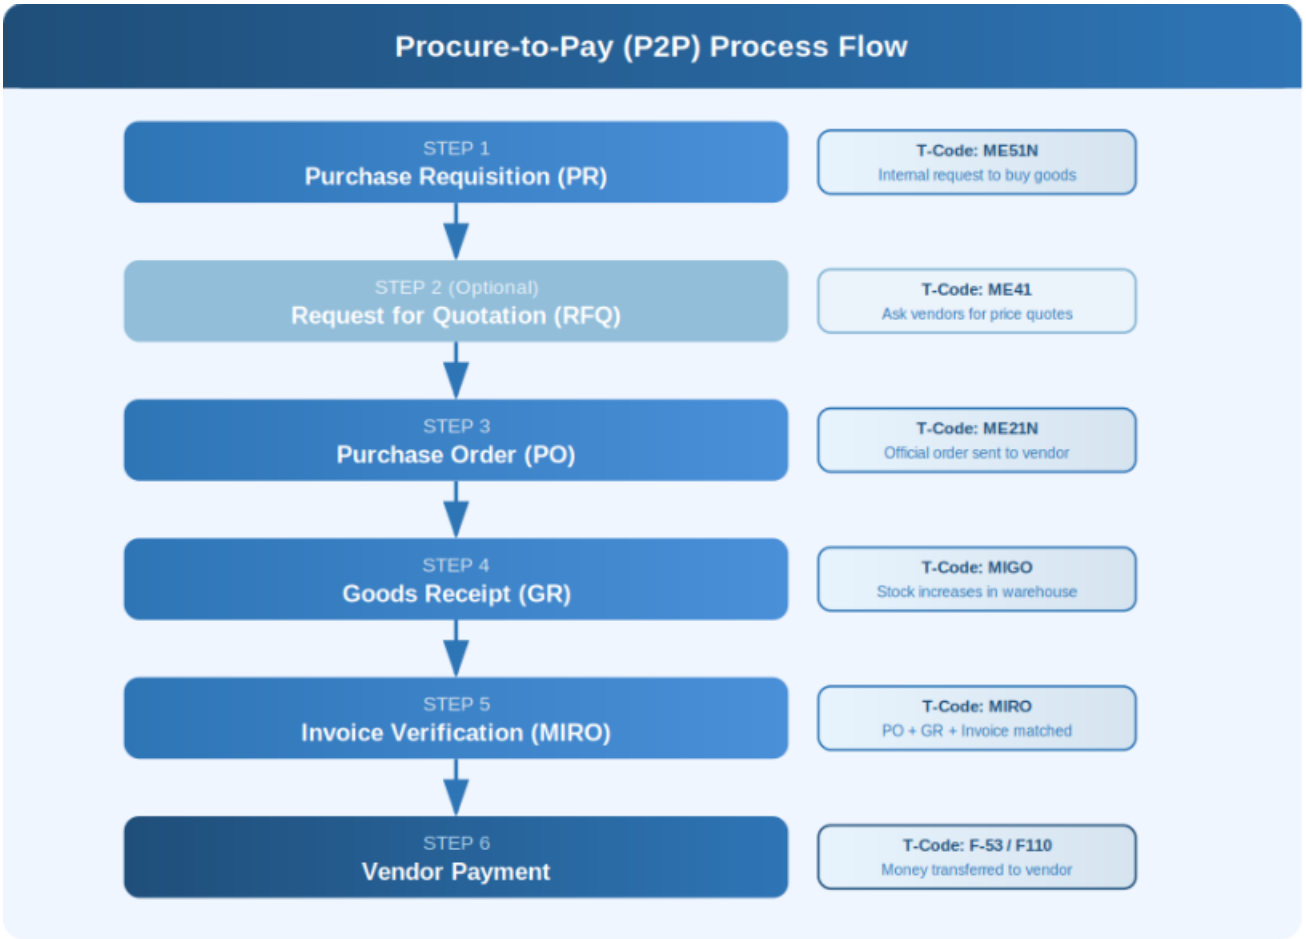
9. Business Process Flows

A process flow is the step-by-step journey that a business activity follows — from the starting point to the final completion. In SAP, every process flow leaves a digital trail of documents that are linked to each other.

9.1 Procure-to-Pay (P2P) Process

P2P is the process of buying goods from a vendor and paying for them. VedaStar follows this process whenever it needs to stock up products for its showrooms.

P2P Flow Diagram



Step-by-Step Explanation

1. Purchase Requisition (PR): The warehouse team at VedaStar Bhubaneswar notices that Samsung 55" LED TVs are running low. They raise a Purchase Requisition in SAP to request the purchase department to order more. T-Code: ME51N
2. Purchase Order (PO): The purchase department approves the PR and creates a Purchase Order for 50 units of Samsung LED TV from Vendor V-1001 (Reliance Digital Distributors) at INR 45,000 per unit. Total PO Value = INR 22,50,000. T-Code: ME21N
3. Goods Receipt (GR): When the goods arrive at the warehouse, the stores team does a Goods Receipt in SAP (T-Code: MIGO). SAP automatically increases the stock

count for VS-MAT-001 at Plant VS10. A Material Document and Accounting Document are created automatically.

4. Invoice Verification (MIRO): The vendor sends a bill. The accounts team uses MIRO to enter the invoice in SAP. SAP checks whether the invoice quantity and price match the PO and GR — this is called 3-way matching. If everything matches, the invoice is posted. A liability is created in FI.
5. Vendor Payment (F-53): On the due date, the accounts team runs the payment (T-Code: F-53 or F110 for automatic payment). SAP transfers the amount from the VedaStar bank account and clears the vendor liability. The accounting entry is: Debit Vendor Account, Credit Bank Account.

Accounting Entries in FI (P2P)

Step	Debit	Credit
Goods Receipt (GR)	Inventory / Stock Account	GR/IR Clearing Account
Invoice Verification (MIRO)	GR/IR Clearing Account	Vendor Account (Payable)
Vendor Payment (F-53)	Vendor Account (Payable)	Bank Account

```
Example: ME21N — Create Purchase Order  Vendor        : V-1001
(Reliance Digital Distributors) Purch. Org.   : VSPO Purch. Group  :
PG1 Plant         : VS10 Material      : VS-MAT-001 (Samsung 55" LED TV)
 Quantity      : 50 EA Net Price     : INR 45,000 Delivery Date :
15.05.2025
```

9.2 Order-to-Cash (O2C) Process

O2C is the process of receiving an order from a customer, delivering the product, and collecting payment. This is VedaStar's main revenue-generating process.

O2C Flow Diagram

Step-by-Step Explanation

6. Customer Inquiry / Quotation: Customer C-2001 (Sharma Electronics Emporium, Patna) contacts VedaStar asking for a price quote on 10 units of Dell Laptops. The sales team creates a Quotation in SAP (T-Code: VA21) showing price, delivery terms, and validity.
7. Sales Order (SO): The customer agrees to the quote and places the order. The sales team converts the quotation into a Sales Order (T-Code: VA01). SAP checks stock availability and credit limit of the customer automatically. Sales Order No.: SO-2025-0041, Qty: 10 units of VS-MAT-003 @ INR 58,000 each. Total: INR 5,80,000.
8. Delivery Document: The warehouse receives a notification from SAP. They pick 10 Dell Laptops from Storage Location SL01 at Plant VS10 and create a Delivery Document (T-Code: VL01N). The delivery date is set as 3 days from the order date.
9. Post Goods Issue (PGI): After the goods are physically dispatched, the team does Post Goods Issue in SAP (T-Code: VL02N). This reduces the stock count by 10 in SAP. An accounting entry is created: Debit Cost of Goods Sold, Credit Inventory Account.

10. Billing / Invoice (VF01): Once PGI is done, the billing team creates a customer invoice (T-Code: VF01). SAP generates the invoice automatically based on the sales order and delivery data. Invoice Amount: INR 5,80,000 + 18% GST = INR 6,84,400. The accounting entry is: Debit Customer Account, Credit Sales Revenue Account.
11. Customer Payment (F-28): The customer pays within the credit period. The accounts team posts the incoming payment (T-Code: F-28). SAP clears the customer receivable. Entry: Debit Bank Account, Credit Customer Account.

Accounting Entries in FI (O2C)

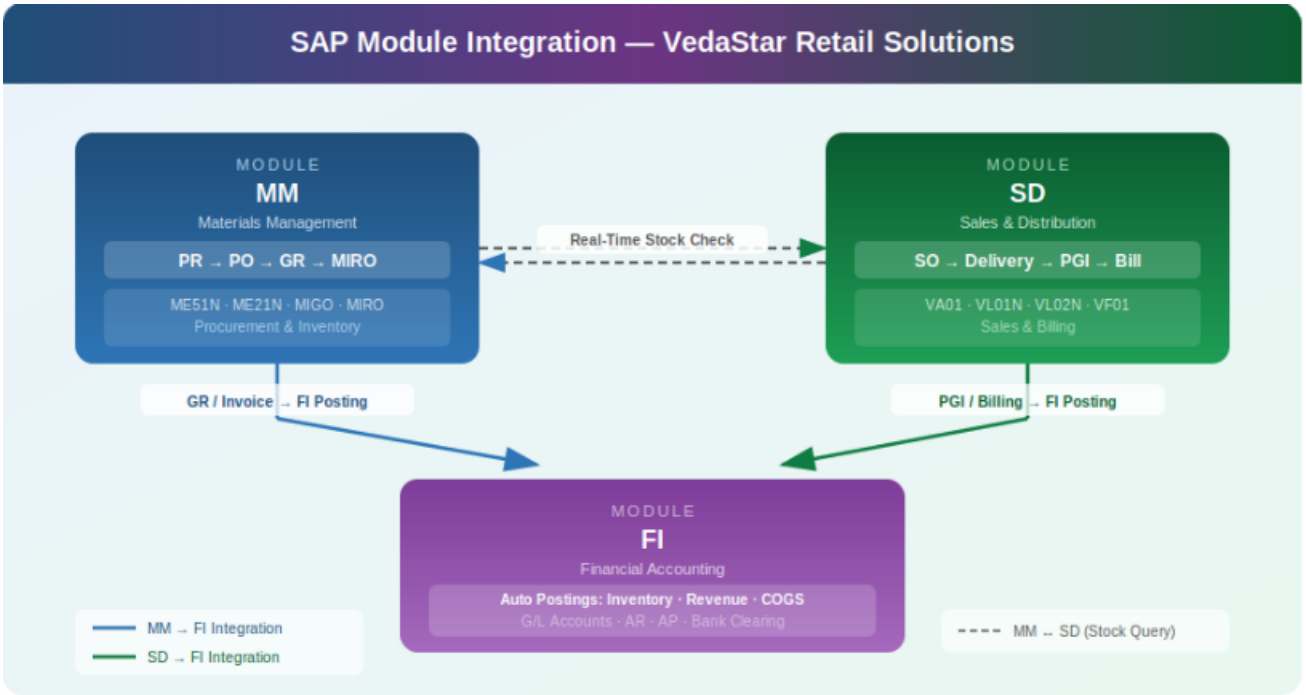
Step	Debit	Credit
Post Goods Issue (PGI)	Cost of Goods Sold (COGS)	Inventory / Stock Account
Billing / Invoice	Customer Account (Receivable)	Sales Revenue Account
Customer Payment (F-28)	Bank Account	Customer Account (Receivable)

```
Example: VA01 — Create Sales Order  Order Type    : OR (Standard Order)
 Sales Org.    : VS30 Dist. Channel : 10 (Retail Showroom)
Division      : 01 (Electronics) Customer      : C-2001 (Sharma
Electronics Emporium) Material      : VS-MAT-003 (Dell Inspiron 15
Laptop) Quantity      : 10 EA Price         : INR 58,000 per unit Req.
Del. Date: 20.05.2025
```

10. Module Integration — How FI, MM, and SD Work Together

One of the biggest strengths of SAP ERP is that all modules are connected. When something happens in MM or SD, SAP automatically updates the FI (accounting) module. The user does not need to manually enter accounting entries — SAP does it automatically. This avoids errors and saves a huge amount of time.

Integration Flow Diagram



10.1 MM-FI Integration

- When a Goods Receipt (GR) is posted in MM → SAP automatically posts an accounting document in FI (Debit Inventory, Credit GR/IR Clearing).
- When an invoice is posted in MIRO → SAP clears the GR/IR account and creates a vendor payable in FI.
- When payment is made (F-53) → The vendor payable is cleared from the FI accounts.

10.2 SD-FI Integration

- When PGI (Post Goods Issue) is done in SD → SAP automatically reduces inventory in MM and posts COGS in FI.
- When a billing document (VF01) is created in SD → SAP automatically creates a customer receivable in FI.
- When customer payment (F-28) is received → The receivable is cleared in FI.

10.3 MM-SD Integration

- Stock availability check during Sales Order (VA01) in SD reads real-time stock data from MM.

- Material details (price, unit of measure) in SD are linked to the Material Master maintained in MM.

In simple terms: MM handles buying, SD handles selling, and FI handles the money. All three talk to each other automatically inside SAP — this is called Real-Time Integration.

11. Important SAP Reports Used in VedaStar

SAP provides many built-in reports that help management make decisions. These reports can be generated at any time and show live data. No need to wait for month-end!

11.1 FI Reports

Report Name	T-Code	What It Shows
Balance Sheet	F.01	Assets, liabilities, and equity of the company
Profit & Loss Statement	F.01	Revenue, expenses, and net profit/loss
Customer Ledger Report	FBL5N	All transactions for a specific customer
Vendor Ledger Report	FBL1N	All transactions for a specific vendor
General Ledger Report	FBL3N	All entries in a particular G/L account
Accounts Payable Ageing	S_ALR_87012085	How much is owed to vendors and for how long

11.2 MM Reports

Report Name	T-Code	What It Shows
Stock Overview	MMBE	Current stock at each plant and storage location
Purchase Order List	ME2M / ME2N	All open and completed purchase orders
Vendor Evaluation Report	ME6H	Rating of vendors based on delivery and quality
Material Movement Report	MB51	All goods receipts and goods issues for a material
Slow-Moving Stock Report	MB52	Items that have not moved in a long time

11.3 SD Reports

Report Name	T-Code	What It Shows
Sales Order List	VA05	All sales orders — open and completed
Delivery List	VL06	Pending and completed delivery documents
Billing Document List	VF05	All invoices raised to customers
Customer Sales Analysis	MCTA	How much each customer has bought
Sales Info System Report	MC+2	Product-wise sales performance report

12. Unique Points of This Project

This SAP ERP blueprint for VedaStar Retail Solutions Pvt. Ltd. has several unique features that make it stand out from a basic student project:

- Indian Business Context: The project is designed around the real-world challenges of an Indian retail company — including GST handling, INR currency, and India-specific payment terms like 30/45-day credit cycles.
- End-to-End Coverage: Both the P2P and O2C processes are covered fully — from the first document to the final payment — with proper accounting entries at each stage.
- 3-Way Matching in P2P: The invoice verification step uses 3-way matching (PO + GR + Invoice), which is the industry-standard best practice for preventing fraud and overpayment.
- Real-Time Integration Design: The project demonstrates how MM, SD, and FI modules share data automatically — no manual accounting is needed after each transaction.
- Multi-Branch Structure: VedaStar operates across 4 cities with different plants and storage locations, making the enterprise structure realistic and complex enough for learning.
- GST Integration: The pricing procedure is designed to include CGST and SGST/IGST automatically based on whether the transaction is intra-state or inter-state — a real requirement for Indian companies.
- Customised Pricing Procedure: The SD module has a customised pricing procedure (VS_PRICE) that handles base price, trade discounts, and GST calculation in sequence.

13. Future Improvements

This project covers the core SAP modules. In the future, the following improvements could be added to make VedaStar's SAP system even more powerful:

Improvement	SAP Module/Feature	Benefit
Add SAP HR (HCM) Module	SAP HCM	Manage employee payroll, leave, and attendance in SAP
Implement SAP CRM	SAP CRM / C4C	Track customer complaints, loyalty programs, and after-sales service
Migrate to SAP S/4HANA	S/4HANA	Faster real-time analytics using in-memory HANA database
Add SAP Analytics Cloud	SAC Dashboards	Live graphical dashboards for top management decision making
Integrate E-Commerce Portal	SAP Commerce Cloud	Connect VedaStar's online store directly with SAP backend
Implement Barcode/RFID Scanning	Extended WM	Faster and more accurate goods receipt using warehouse scanning

Improvement	SAP Module/Feature	Benefit
Add EDI with Vendors	SAP EDI / IDocs	Automatic purchase orders sent to vendor systems electronically

14. Conclusion

This project successfully demonstrates how SAP ERP can transform a growing retail company from a disorganised, manual operation into a streamlined, data-driven business. VedaStar Retail Solutions Pvt. Ltd. — though fictitious — represents the real-world challenges faced by thousands of small and medium Indian businesses today.

By implementing the three core modules — FI, MM, and SD — VedaStar can now:

- Know exactly how much stock is available at every branch at any moment
- Raise purchase orders and sales invoices digitally — no more paper
- Automatically post accounting entries without manual effort
- Receive instant reports on sales, profitability, vendor performance, and cash flow
- Comply with GST regulations easily through SAP's built-in tax engine

SAP ERP is not just software — it is a way of organising a business correctly. Every student learning SAP is essentially learning how real companies across the world manage their daily operations. The concepts of Purchase Requisitions, Goods Receipts, Sales Orders, and Financial Postings are not just SAP features — they are universal business practices.

This project gives a clear, step-by-step understanding of how these processes work, how they are configured in SAP, and how they connect with each other. It is a strong foundation for any student aiming to build a career in SAP consulting, business analysis, or ERP project management.

"SAP connects every part of a business — just like the human nervous system connects every part of the body."

15. Appendix — Complete T-Code Reference

A T-Code (Transaction Code) is a shortcut in SAP that takes you directly to a specific function or screen. Instead of navigating through menus, you simply type the T-Code in the command bar and press Enter.

FI — Financial Accounting T-Codes

T-Code	Function	When Used
FS00	Create / Edit G/L Account	Setting up ledger accounts
FB50	Post G/L Document (Journal Entry)	Manual accounting entries
FBL3N	G/L Account Line Items Report	View all entries in an account
FBL1N	Vendor Line Items Report	View vendor payment history
FBL5N	Customer Line Items Report	View customer payment history
F-53	Post Outgoing Payment (Vendor)	Paying a vendor manually
F-28	Post Incoming Payment (Customer)	Receiving customer payment
F110	Automatic Payment Run	Batch payment to multiple vendors
F.01	Financial Statements	Balance Sheet and P&L
OB13	Define Chart of Accounts	Configuration — done once
OBB8	Define Payment Terms	Set 30/45-day payment terms

MM — Materials Management T-Codes

T-Code	Function	When Used
MM01	Create Material Master	New product added to system
MM02	Change Material Master	Update product details
MM03	Display Material Master	View product information
XK01	Create Vendor Master	New vendor added
XK02	Change Vendor Master	Update vendor details
ME51N	Create Purchase Requisition	Request to purchase goods
ME21N	Create Purchase Order	Official PO to vendor
ME22N	Change Purchase Order	Modify an existing PO
ME23N	Display Purchase Order	View PO details
MIGO	Goods Movement (GR/GI)	Receive or issue goods
MIRO	Invoice Verification	Enter vendor bill in SAP
MMBE	Stock Overview	Check current stock levels
MB51	Material Document List	View all GR/GI history

SD — Sales & Distribution T-Codes

T-Code	Function	When Used
XD01	Create Customer Master	New customer added
XD02	Change Customer Master	Update customer details
VA11	Create Inquiry	Customer asks for information
VA21	Create Quotation	Send price quote to customer
VA01	Create Sales Order	Customer confirms purchase
VA02	Change Sales Order	Modify an existing order
VA05	Sales Order List	View all sales orders
VL01N	Create Outbound Delivery	Prepare goods for shipping
VL02N	Change Delivery / Post PGI	Confirm goods dispatched
VF01	Create Billing Document	Raise invoice to customer
VF02	Change Billing Document	Modify an invoice
VF05	Billing Document List	View all invoices
MCTA	Customer Analysis	Sales report by customer

General / Cross-Module T-Codes

T-Code	Function
SPRO	Configuration/Customisation menu — all SAP settings
SE38	ABAP Editor — write and run ABAP programs
SM30	View/Table Maintenance — view configuration tables
SU01	User Administration — create/manage SAP users
AL11	SAP File Directory
ST05	SQL Trace — for performance analysis

End of Report
